

Morning Dashboard

Set up a computer

Nine steps, about two minutes, **once per computer and never again.**

You never create a folder — it already exists on SharePoint. Windows makes the local copy for you.

The folder

MaxSolutions-Mississauga → Documents →
Daily Morning Dashboard

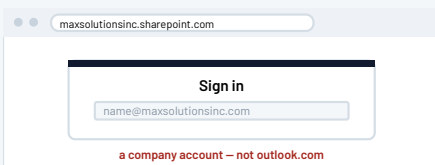

The file

Morning_Dashboard.html, inside that folder

Build

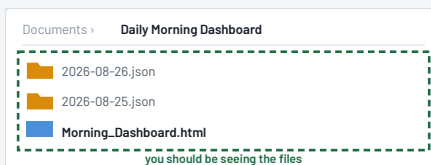

30

1 Open the folder, sign in

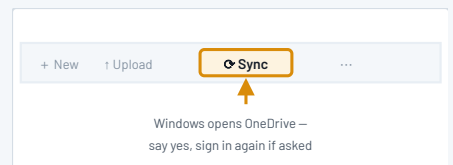

Edge or Chrome. Sign in with that person's **work** account.

2 Go inside the folder

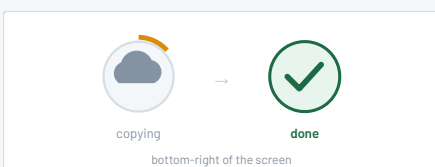

Double-click **into** it. Syncing from the level above drags down every other folder too.

3 Click Sync

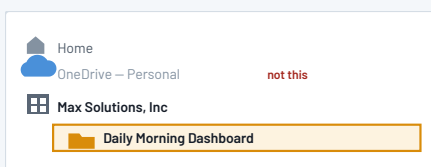

In the toolbar, or under **...** **Not** "Add shortcut to OneDrive" — pick one and stick to it.

4 Wait for the tick

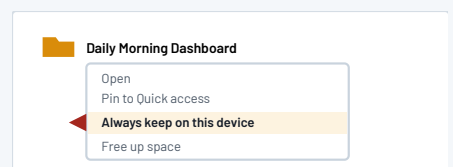

Seconds, on a folder this small.

5 Find it in File Explorer

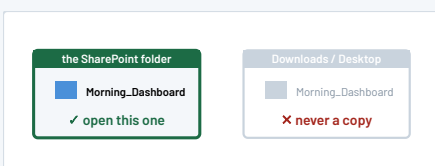

Left sidebar, under the **company name** with a building icon. Not the blue cloud above it.

6 Always keep on this device

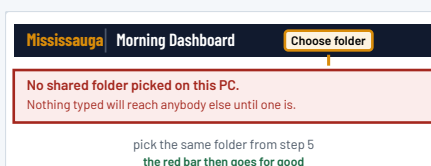

Do not skip this. Without it Windows keeps files in the cloud and the dashboard reads them as **empty**.

7 Open the dashboard

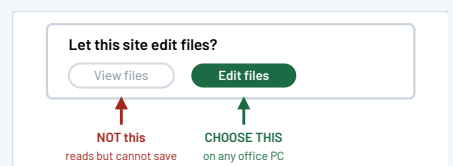

Double-click it **in that folder**. An old copy saves boxes back empty over everybody else's.

8 Press Choose folder

Top-left of the dashboard. Pick the folder you found in step 5.

9 Answer Edit files

The most important click here. "View files" looks safe and silently stops the PC saving. **Boardroom screen: see overleaf.**

The boardroom PC, and when something looks wrong

The boardroom screen

Same nine steps, two differences.

It needs a company account signed in. That machine is not on the domain, so no account is on it. Syncing does **not** need domain membership — it only needs somebody to sign into OneDrive on it once, with a Max Solutions account that can see the library. Use a **shared** account, never a person's: a wall PC signed in as somebody who has left is a problem waiting to happen.

At step 9, answer **View files** instead — if the screen only ever shows the morning. A machine that cannot write cannot damage anybody's morning, and will never fail in front of the room trying. If people do type into it during the meeting, answer **Edit files** like any other PC.

Each morning: open the dashboard and press **Present**. It goes full screen, reads the folder, writes nothing, and refreshes every fifteen seconds — so comments typed at people's desks appear on the wall on their own.

Where the folder lands on every PC

```
C:\Users\yourname\Max Solutions, Inc\MaxSolutions-Mississauga - Documents\Daily Morning Dashboard
```

Same shape on every machine. **Max Solutions, Inc** is the entry with the building icon, not the blue cloud.

If that account is ever needed again, send IT this

Can you create a Max Solutions account for the Mississauga boardroom PC — something like boardroom@maxsolutionsinc.com — with read access to the MaxSolutions-Mississauga SharePoint site? It is for a wall display in the morning meeting. It only ever reads one folder and never writes. It needs a licence that includes SharePoint, and it must be a shared account rather than a person's, because it stays signed in on that machine.

Start here when one machine misbehaves

Check this PC

What this computer looks like right now. Nothing here changes anything.

This PC thinks today is	2026-08-26 (4:11:51 PM)
The dashboard is showing	2026-08-26
Time zone	UTC
Folder	Daily Morning Dashboard
Days kept on this PC	1
Browser	Chromium 141, Not?A_Brand 8
Page version	build 30 (2026-08-26)
Reading 2026-08-26.json	ok — last saved 8/26/2026, 4:11:50 PM
Fields that differ from the file	none, the screen matches the file
Comments	file has 2, this screen has 2
Newest morning in the folder	2026-08-26
Mornings in the folder	1
Writing to the folder	ok

Read this out and it says which of the two is wrong: this computer, or the file everybody shares.

Close

Check this PC on the toolbar compares that computer against the shared file and says which of the two is out of step. It changes nothing, so it is safe to run mid-meeting.

What each symptom actually means

Red bar: <i>no shared folder picked</i>	Steps 8 and 9 not done here, or Chrome dropped the permission after a restart. Press Choose folder .
Red bar: <i>this is an old copy</i>	Somebody is running a newer version. Close the tab and open the copy in the SharePoint folder.
NOT shared — saved on this PC only	The write was refused. Almost always View files at step 9, or the account is read-only on the library. Nothing is lost.
Boxes empty that should not be	Always keep on this device was skipped at step 6. Set it and reopen.
One PC shows a different day	That computer's clock is wrong, so it reads a different day's file. Check this PC says so outright.

Files like `2026-08-25-SOMEPC.json`

Two people saved in the same sync minute and OneDrive kept both. The dashboard folds them back in by itself – nothing to do.

A comment went missing

SharePoint keeps version history on every one of these files: right-click the day's file on the site → **Version history**.

Replacing the dashboard itself

It is one file. Drop the new `Morning_Dashboard.html` into the SharePoint folder. Everybody has it next time they open it.
